

Book Recommendation Dataset

This dataset includes information about books published during a defined time period and cross-references them with user ratings. It can serve as a foundation for developing e-commerce features, recommender systems, and targeted online advertising.

Research Questions:

1. Analyze best-selling books, genres, and publishers across years.
2. Explore user demographics and behavioral patterns (geography, age groups, and rating behavior).
3. Examine rating distributions by user's geographic origin and age group.
4. Compare registered versus active users across continents and age demographics.
5. Identify the most highly rated genres by age and geographic characteristics.

Conclusions:

1. Average book ratings should be interpreted alongside rating volume to ensure reliability of insights.
2. The dataset is dominated by users from the US, particularly ages 45–75.
3. African users show lower rating activity and provide lower rating scores overall.
4. Active engagement of users is limited: only 32% of North American users and 10% of Asian users submit ratings.
5. Suspense & Thriller and Teen Fiction are the most highly rated genres across age groups; Fantasy Fiction and Children's Books score higher in North America, while Art-focused genres lead in other regions.

Book-Title	AVG Book Rate	Ratings Count
The Secret Life of Bees	8.48	406
